AI, or artificial intelligence (人工智能), is everywhere today! From smartphones to smart homes, AI makes our lives easier. But what exactly is AI? Think of it as a super-smart computer that can learn, solve problems, and even understand human languages. Now, let's explore how AI helps us.

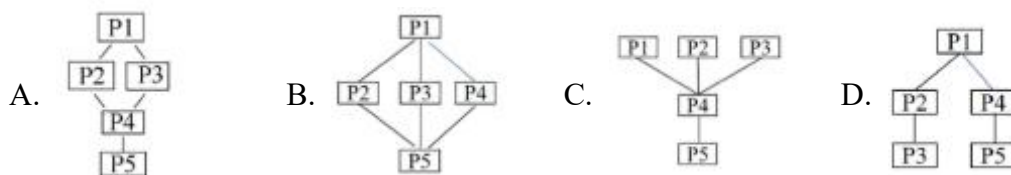

AI is like a helpful assistant in daily life. For example, voice assistants like Siri or Alexa can answer questions, set alarms, or control your home lights. They use “natural language processing” to understand what you say. In schools, AI tools help teachers grade homework faster and suggest personalized learning plans. Some apps even correct your spelling and grammar in real time!

AI also plays a big role in healthcare and education. In hospitals, AI can analyze X-rays and help doctors find diseases early. It's also used to develop new medicines. Meanwhile, in education, AI-powered apps like Duolingo teach languages by fitting in with your learning speed. Imagine having a 24/7 tutor (家庭教师) who knows exactly what you need!

Although AI can do many things, it's not perfect. Some people worry that it might take all jobs, like factory work or customer service. However, experts say AI will also create new jobs, like robot repair and AI programming. The key is to use AI wisely. For example, self-driving cars use AI to reduce accidents, but humans still need to monitor them.

Remember, AI is a tool—it doesn't replace humans, but it can make our work smarter. So let's accept AI with curiosity! By learning to use it responsibly, we can build a better future together.

These years, the school has spent more money on smart education. It got new things like smart blackboards. With the “Jike System”, it also made a special platform (平台) called “Smart Brain”. This platform helps with all parts of teaching, making things easier for teachers and students.

Then, the school set up the “Smart Brain” platform. It saves many learning materials (材料), makes school-made question banks, and designs (设计) homework based on students’ test results.

Teachers in the school also use AI to make their classes lively. For example, physics teacher Chang Renfei uses DeepSeek to search for fun teaching materials. He turns boring physics formulas (公式) into interesting stories. This helps students understand better.

Using AI in education isn’t just about technology. It also helps students think in new ways. Students like Zhang Hongxuan and his team made a cool robot called “Eco-Messenger”. They used AI to make it

dance and follow lines. Their work won a big prize in a competition.

九、阅读理解

A

AI, or artificial intelligence (人工智能), is everywhere today! From smartphones to smart homes, AI makes our lives easier. But what exactly is AI? Think of it as a super-smart computer that can learn, solve problems, and even understand human languages. Now, let's explore how AI helps us.

AI is like a helpful assistant in daily life. For example, voice assistants like Siri or Alexa can answer questions, set alarms, or control your home lights. They use “natural language processing” to understand what you say. In schools, AI tools help teachers grade homework faster and suggest personalized learning plans. Some apps even correct your spelling and grammar in real time!

AI also plays a big role in healthcare and education. In hospitals, AI can analyze X-rays and help doctors find diseases early. It's also used to develop new medicines. Meanwhile, in education, AI-powered apps like Duolingo teach languages by fitting in with your learning speed. Imagine having a 24/7 tutor (家庭教师) who knows exactly what you need!

Although AI can do many things, it's not perfect. Some people worry that it might take all jobs, like factory work or customer service. However, experts say AI will also create new jobs, like robot repair and AI programming. The key is to use AI wisely. For example, self-driving cars use AI to reduce accidents, but humans still need to monitor them.

Remember, AI is a tool—it doesn't replace humans, but it can make our work smarter. So let's accept AI with curiosity! By learning to use it responsibly, we can build a better future together.
