

（时间：90 分钟，满分：100 分）

一、语法选择（本大题共 15 小题，每小题 1 分，满分 15 分）

阅读下面的短文，按照句子结构的语法性和上下文的连贯的要求，选择可以填在横线上的最佳选项。

Do people in different countries have the same idea of numbers? The unlucky number for Chinese people is usually 4 because it sounds like 1 word “death”. 14 is 2 than 4 because of its sound too. On the contrary, 9 is a 3 number for Chinese. It means “long” and “long life”. 8 is as 4 as 18 for they sound like “rich” and “certain rich”.

I 5 in Europe for a long time, and I find that in many western countries people don't like the number 13. 6 took me years to look for the reason. Till one of my foreign friends told me that there 7 13 people at the Last Supper with Jesus Christ and then he was killed. That's 8 it is an unlucky number. They try not 9 this number in many ways. For example, 10 you go into a lift, you will not see the number 13 in it. Many people 11 believe Friday the thirteenth is a very unlucky day. It is usually 12 Friday in November. They are very careful 13 that day such as driving slowly.

It is interesting to know how people like or dislike 14 numbers. However, we 15 take it seriously. As long as the number is useful, it is a good number.

|-----------------|--------------|---------------|-----------------|
| 1. A. a | B. an | C. the | D. / |
| 2. A. bad | B. badly | C. worse | D. the worst |
| 3. A. luck | B. lucky | C. luckily | D. luckiness |
| 4. A. good | B. well | C. better | D. the best |
| 5. A. study | B. studied | C. will study | D. have studied |
| 6. A. This | B. It | C. That | D. They |
| 7. A. is | B. was | C. are | D. were |
| 8. A. when | B. how | C. why | D. what |
| 9. A. use | B. used | C. using | D. to use |
| 10. A. if | B. because | C. though | D. unless |
| 11. A. ever | B. never | C. also | D. already |
| 12. A. four | B. the four | C. fourth | D. the fourth |
| 13. A. on | B. at | C. in | D. with |
| 14. A. any | B. some | C. each | D. every |
| 15. A. couldn't | B. shouldn't | C. mustn't | D. wouldn't |

二、完形填空（本大题共 10 小题，每小题 1 分，满分 10 分）

根据短文内容，从各题所给的四个选项选择一个最佳选项。

Long long ago, there was a man named Yi in China. He was very good at math. Even the emperor knew about Yi's special talent.

The emperor wanted to build a new part of the Great Wall, _____ 16 _____ he didn't know how many bricks(砖) he needed. He knew Yi could help him find the _____ 17 _____.

"I know just how many bricks you will need," Yi told the emperor. "You will need 99,999." "Are you sure?" asked the emperor.

"Yes," said Yi. "I am never _____ 18 _____ when it comes to(涉及到) math!"

The emperor then made a deal with Yi. "If you are right, you can live in _____ 19 _____ palace. But if you are wrong, you will have to work hard day and night for three years," said the emperor.

The emperor had his men make the bricks. When they _____ 20 _____, they had exactly (正好) 99,999.

Yi and other workmen then _____ 21 _____ the wall. The work took many years.

When they _____ 22 _____ finished building the wall, there was one brick left. Yi put that final brick on the wall.

"Aha!" said the emperor. "You are wrong! There is one brick left."

"I am not wrong," said Yi. "This brick is a magic brick. If you _____ 23 _____ it, the whole wall will fall down!"

"Why should I believe you?" asked the emperor. "Move it and see what will happen," said Yi.

The emperor was _____ 24 _____ that the wall would fall, so he left the brick on the wall. Then he kept his _____ 25 _____. He invited Yi to live in his palace.

Today, if you visit the Great Wall, you will still find Yi's magic brick!

|-----------------|--------------|--------------|----------------|
| 16. A. and | B. so | C. but | D. or |
| 17. A. reason | B. problem | C. answer | D. man |
| 18. A. sick | B. wrong | C. careful | D. lucky |
| 19. A. my | B. your | C. his | D. her |
| 20. A. started | B. reached | C. forgot | D. finished |
| 21. A. painted | B. built | C. cleaned | D. pushed |
| 22. A. suddenly | B. certainly | C. finally | D. comfortably |
| 23. A. move | B. sweep | C. hang | D. touch |
| 24. A. glad | B. excited | C. surprised | D. afraid |
| 25. A. diary | B. promise | C. dream | D. opinion |

三、阅读理解（本大题共 15 小题，每小题 2 分，满分 30 分）

Hua Luogeng loved studying maths when he was young. However, his family was poor, so he had to drop out when he finished secondary school and help his parents to run the store.

It didn't stop Hua Luogeng from studying maths. He always studied maths while he was taking care of the business.

One day, a lady came to the store to buy something. Hua Luogeng lost himself in a maths problem and he didn't pay attention to the customer.

When the customer asked how much she had to pay, he told her the number that he just calculated (计算). The customer gave a loud cry, "Is it that expensive?"

The cry pulled him back from his maths world. He found he just made a fool of himself. Then he quickly wrapped (包裹) the thing up and collected the money.

After the customer left, Hua Luogeng wanted to continue his calculation, but his draft (草稿) paper was gone. He realized that the piece of paper he just used for wrapping was his draft paper. Hua Luogeng was so nervous and ran after the customer at once. He finally caught up with the lady. The lady was moved and returned it to him.

His love for mathematics helped him to overcome many difficulties. He studied by himself and finally he went to Tsinghua University to work as a professor. He also published ten works of maths.

Hua Luogeng was a famous mathematician worldwide. He made a great contribution to the development of maths in China. He was praised as "The father of modern Chinese mathematics" and "China's Einstein". He has influenced the Chinese a lot.

26. What's the meaning of "run" in Paragraph 1?

- A. 奔跑 B. 行使 C. 参赛 D. 经营

27. Why did Hua Luogeng leave school when he was young?

- A. Because he didn't like studying.
B. Because he had to help his parents.
C. Because he had received enough education.
D. Because he couldn't afford to go to school.

28. How does the text show us that Hua Luogeng loved maths?

- A. By offering ideas. B. By asking questions.
C. By giving an example. D. By listing numbers.

29. Which of the following is the right order according to the text?

- a. Hua Luogeng quickly wrapped the thing up with the draft paper.
b. Hua Luogeng gave all his attention to a maths problem.

- c. The lady was moved and returned the draft paper to him.
d. Hua Luogeng realized he used his draft paper to wrap up the thing.

A. a-b-c-d B. b-a-d-c C. b-c-a-d D. a-c-d-b

30. What can we learn from the text?

- A. Success comes easy. B. One is never too old to learn.
C. Behind bad luck comes good luck. D. Nothing is impossible for a willing heart.

B

Can you say the meaning of “Zero”? Can you do addition and subtraction (加减法)? Most people can. But do you know bees can do these things too? A study shows that bees have even greater math abilities. After some training, they can know the difference between even numbers (ending in 0, 2, 4, 6 and 8) and odd numbers (ending in 1, 3, 5, 7 and 9).

Some Australian scientists put up different cards with an odd or even number of triangles (三角形). They used the numbers 1 to 10. Then they trained the first group of bees to choose odd numbers and the second group to choose even numbers. If a bee flew to the right card, it would get sugar water. If it chose the wrong card, it got bitter (苦的) water.

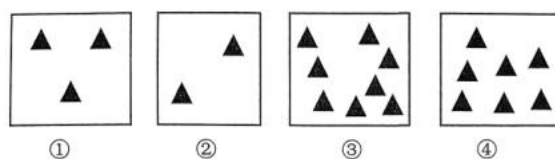

In a short time, all the bees knew what odd numbers or even numbers were. They could fly to the right numbers 80% of the time. After that, the scientists added new cards with the numbers 11 and 12. The bees never saw the numbers in their training before, but they could choose rightly 70% of the time. Surprisingly, the bees even learned odd numbers more quickly than people.

How did the bees learn the numbers so fast? Scientists didn't have a clear idea. But they believe if they find the answer, it will help them build better and faster computers. After all, a bee's brain is about 86,000 times smaller than ours!

31. How does the passage start?

- A. By listing facts. B. By giving examples. C. By asking questions. D. By using pictures.

32. Which of the following card should the second group of bees fly to?

- A. ①④ B. ②③ C. ①② D. ③④

33. Which of the following is TRUE according to the passage?

- A. Our brains are 8,600 times bigger than bees.
B. Bees like bitter water rather than sugar water.
C. After training, bees can learn even numbers more quickly than people.
D. After training, bees can know the difference between even numbers and odd numbers.
34. What can we learn from the last paragraph?
A. Bees have a great ability to learn numbers.
B. Bees like odd numbers better than even numbers.
C. Scientists know how bees learn numbers.
D. Scientists know why bees can tell different numbers.
35. Where can we read this passage in the newspaper?
A. Animal World. B. Sports Life. C. Festival Week. D. Beautiful Cities.

C

You may feel that math is difficult and boring. Is it possible that you've been looking at math in the wrong way?

Numbers are beautiful

There is math hidden in beautiful human bodies. Measure the length from your head to your belly button (肚脐) and from your belly button to your feet. The ratio (比例) of these two numbers is always around 0.618. This is the golden ratio, which can be seen everywhere, like in nature, music and paintings.

In Chinese poems, we can also see the beauty of numbers. As Li Bai wrote, "My skiff (小船) has left ten thousand mountains far away", "A thousand miles in one day"—all these numbers show how fast Li Bai traveled and how happy he felt.

Curves (曲线) are beautiful

"Sine curves" are beautiful. They go towards the two opposite directions on and on without ever ending. When you look at them, you may feel like standing by the sea and watching the waves slowly moving. When listening to music, the sound waves from guitars or pianos are made up of sine curves. "Tangent curve" is like a waterfall, just as Li Bai wrote, "dashing down three thousand feet from on high".

Formulas (公式) are beautiful

There are some amazing formulas. In a right-angled triangle, the square of the longest side is equal to the sum of the squares of the other two sides. How amazing! Just as Chinese-American mathematician Chern Shingshen said, "Math is fun!"

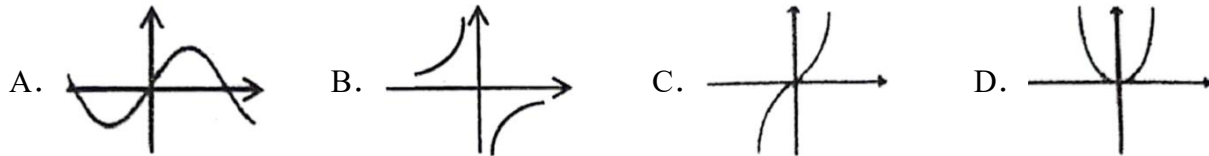

36. If the ratio of a thing is around 0.618, _____.

- A. it is a golden object B. it only happens in human bodies
C. it should be something used for math study D. it might bring people a sense of beauty

37. Why does the writer mention Li Bai and his poems in the passage?

- A. To introduce the topic. B. To support his opinion.
C. To share the beauty of Li Bai's poems. D. To offer advice on learning math.

38. What does a sine curve look like?

39. The underlined word “dashing” probably means _____.

- A. 流淌 B. 跳跃 C. 猛冲 D. 闪烁

40. What is the passage mainly about?

- A. Why math is beautiful and fun. B. Why math is difficult and complex.
C. How we can learn math in a right way. D. How math helps us live a better life.

四、阅读还原 (本大题共 5 小题, 每小题 1 分, 满分 5 分)

请阅读下面的短文, 并从文后的六个选项中选择五个还原到原文中, 使原文意思完整、连贯。

Do you love maths? 41 Fun activities helped students fall in love with maths!

On the first day, students put on plays and we watched some of them. My favorite play was about Hua Luogeng, a Chinese mathematician (数学家). Three students played Hua at three different ages. 42

The second day was the most interesting. Some students made rocket models with plastic (塑料的) bottles and launched them on the playground. 43 The most successful one flew as high as the second floor of the teaching building.

44 Thy showed us some advanced equipment (先进的装备) and did experiments with us. For example, we made a small water-cleaning system. It turned dirty water into clean water! After finishing the experiment, I felt the magic of science.

45 Students are already looking forward to next year's festival!

- A. The school invited some college students on the third day.
B. Recently, our school held a three-day maths festival.
C. They let us know about his amazing life and his love for maths.
D. They said making them was a challenge, but they finally succeeded.
E. The festival ended with a maths teacher's speech.
F. Only a few students could take part in it.

五、阅读匹配（本大题共 5 小题，每小题 2 分，满分 10 分）

左栏是五个学生的情况描述，右栏是七条关于礼物的建议。请为每个人选择合适的建议，并将答题卡上对应题目所选的选项涂黑。

46 Jack wants to buy a birthday present for his best friend Lucy. He wants to buy something with her lucky number on it.	A. Japanese people are careful about presents. If you are choosing a present for an elder, a nice watch is a good choice. Remember to put it in a nice box!
47 Daming's mother runs every day to keep fit. Daming wants to buy her something so that her feet won't hurt when running.	B. Why not buy a pair of ERKE sport shoes? They are comfortable and not expensive, with different styles for people of all ages. They can protect your feet when doing exercise.
48 Fina is traveling around France. She is going to visit a friend in Paris. She is preparing some gifts for him.	C. A set of kitchen knives is the best choice for a housewife. But it's not a good idea to send knives to people in some European countries because that means you want to cut your friendship!
49 Julie is studying in America. She is planning to buy some gifts for the 5-year-old girl in her host（寄宿）family.	D. French people are romantic and they like flowers. If you are going to visit a French family, just bring some flowers. Remember the number of the flowers should be odd, like 5, 7, 9, or 11.
50 Lingling's Japanese friend Leo loves Chinese culture. She wants to buy him a gift when she meets him in Japan this summer.	E. Paper cutting is an important part of Chinese culture. Its pictures and patterns help to tell more about the Chinese culture. They are beautiful and mean good luck and best wishes.
	F. Children always love gifts. Candies and toys are great. It's better to cover them carefully with nice paper. They will have fun opening the gift and finding what's in it.
	G. Lottery tickets are common presents. It is not expensive and can bring surprise and good luck. Go and choose the lucky numbers for your friend!

六、短文填空（本大题共 15 小题，每小题 1 分，满分 15 分）

A(语篇填词)

根据短文内容及首字母提示在所给横线上写出完整单词，并注意其形式。

Chinese people are used to thinking the numbers 6, 8 and 9 are lucky ones, but how about 142857? This number seems common, but it is the most amazing number in the w51. Why? Let's look at a few facts about this number.

First, get the number multiplied (相乘) by 1 to 6 and all the results are amazing because they are made up of the same numbers but in different orders. For example, 142857 multiplied by 2 is 285714

while 142857 multiplied by 6 is 857142. S 52, if it is multiplied by 7 and we get a more amazing number 999999. Third, the number is multiplied by i 53 and we can get a super large number 20408122449. However, when we a 54 the front five numbers to the back six numbers we get e 55 the same number 142857 again. Is it amazing?

In fact, people found this mysterious (神秘的) number inside the pyramids (金字塔) of Egypt. People also discovered the number is linked to the days of a week. So you see, nature is really amazing. And we can learn a lot from it.

B(语法填空)

阅读下面语篇,在空白处填入适当的单词或括号内单词的适当形式,必要时可加助动词或情态动词。

Zu Chongzhi was one of the 56 (great) mathematicians (数学家) in ancient China. He was born during the Northern and Southern dynasties. From a young age, Zu 57 (teach) natural science, astronomy (天文学), math and so on by his teachers. The little boy showed interest in all of 58 (this) subjects, especially in math.

Zu was best known for his calculation (计算) of pi (π). According to the record, he did all the work using nothing but 59 (wood) sticks. He spent lots of time working out the value between 3.1415926 60 3.1415927. No one at that time was able to do 61 (well) than Zu. And now the achievement is praised by people around the world. In order 62 (remember) Zu, some mathematicians suggest calling pi “Zu Lv”.

Zu made great progress not only in math, but also in astronomy. He worked out that a year should be 365.24281481 days long and 63 (create) the Daming Calendar. However, government officials at that time did not agree with Zu. The great mathematician never saw his calendar put into use. Almost ten years 64 his death, the new calendar was accepted.

Zu was an 65 (invent), too. He once made a vehicle (车辆) which carried a pointer (指针). No matter how the vehicle turned, the pointer always pointed to the south.

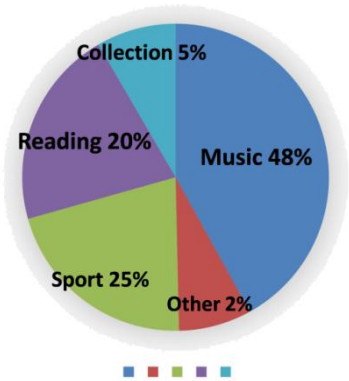

七、书面表达 (15 分)

66. 当前,学生的学习生活多姿多彩,业余爱好也多种多样。下图是我们对某所中学 300 名学生业余爱好的调查结果。请根据下要求,用英语写一篇短文。

要求: 1、必须包括: ①调查结果; ②你自己的爱好、选择的原因及带来的益处;

2、文中不得出现真实的校名和人名;

3、词数: 80~100 (文章开头已给出, 不计入总词数)

Many students have hobbies. Here is the result of the survey about what 300 students usually do in their free time. _____
