九、阅读填空

It is often said that the best way get to the bottom of a hard problem is to sleep on it. Does this make sense? 1

A team of researchers at Northwestern University, US, found that sleeping is useful in both strengthening (增强) and reorganizing (重组) memory. This can help you solve problems.

The researchers did an experiment on 57 university students. They asked students to solve 42 difficult puzzles on the first day. Students worked on each puzzle while listening to different music. 2 By the end, there were six puzzles that the students still hadn't solved. 3 They were given special sleep-monitoring (睡眠监测) and music devices (设备). The devices played music connected with the unsolved puzzles while the students were in the slow-wave (慢波) sleep stage (阶段). This stage is when people are likely to dream and recognize their memories.

The next morning, the students tried the unsolved puzzles again. Researchers found they were 55 percent more likely to solve them. The music activated (激活) the memories they had of the puzzles while they were sleeping. 4

Former studies of both people and animals have shown that sleep can not only strengthen memory, but also help us organize and send information. 5 So the next time you face a difficult problem, sleep on it. Play some music to remind yourself of the problem.

- A. A new study shows that it does.
- B. This study is more evidence (证据) of these findings.
- C. The research encouraged students to remember the music they heard while solving the puzzles.
- D. The students then went back home to sleep.

- F. They didn't want to give up.
