The human brain weighs about 1.4 kilograms, but it can hold much more information than most computers. However, there is another difference between humans and computers. Computers don't forget information they are given, but humans often do. No one remembers every thing, and luckily we don't usually have to. 1 Here are some suggestions.

2 This will help you keep it in mind longer, especially for memorizing formulas (公式) or facts.

Always review information. 3 For example, before you go to sleep, it's a good idea to review the new things you learned that day.

4 It is always easier to remember things through discussions. You can have a discussion about what's right and what's wrong, and it will lead to the right answer.
