People have believed for a long time that laughter, as the old saying goes, is good for the soul. There is now scientific evidence that it is also good for the 16. Recent research has shown that laughter strengthens the heart, helps the flow of blood 17 the body, reduces pain, aids healing, fights infections, and decreases blood pressure. It also improves memory, makes people feel more confident, and 18 to a positive view of life.

Laughter Clubs None of this 19 would surprise Dr. Madan Kataria. After reading about some of the benefits of laughter, he 20 a “Laughter Club” in a public park in Bombay, India. That was in 1995. There are now more than 2,500 such clubs around the world following his practice.

Club meetings aren’t exactly 21, but that’s sort of the point. Although the noise may surprise those passing by, the participants know exactly what they’re doing and why they’re doing. It’s good for them. Meetings are often held 22 in the day, so people can get in a good twenty minutes or more of laughing before they head off for work. Once there, members believe, they concentrate (集中心思) better and are more 23.

Just Fake It How do these clubs find enough jokes to keep everyone howling? They don’t. According to Dr. Kataria, it doesn’t 24 if laughter is produced naturally, by actually finding something funny, 25 if it is faked (假的). The benefits to the body are the same. Laughter club leaders get things going without any comedians around to help.

A

We have heard about people with special memories. Recently there has been a report about a woman from Australia who can remember almost every detail (细节) of all the events in her daily life.

Rebecca Sharrock, 25 years old, is one of just 80 people worldwide who have Highly Superior.

Autobiographical Memory (HSAM, 超级自传体记忆症). It means she can remember every small event, which most people would forget in days, as if it had happened just minutes ago.

“I remember my mum putting me in the driver’s seat of a car and taking a picture of me when I was 12 days old”, she said. “That’s my earliest memory. I remember every day since then. I can’t tell all the dates because I was too young to understand calendars, but I remember what I did that day, what the weather was like and so on.”

Rebecca can also reexperience taste. “When I was five years old, I ate my favorite food, Black Forest cake. The memory is so strong that every time I think of it, I can nearly taste it.”

However, sometimes her memories prove (证明) to be painful because they’re not just events that she remembers. “When I relive memories, the feelings return, too,” Rebecca said. “For example, I remember falling over when I was three at my grandparents’ house and hurting my left knee. Talking about it now, I feel painful in my left knee.”

“Last Halloween, I got very scared because of my classmate’s costume (戏服). At night, I have to sleep with the music and a soft light on,” she added. “If it’s too dark or quiet, my mind would be filled with all these memories and I can’t sleep.”

- ④She ate her favorite food, Black Forest cake.

A. ①③②④ B. ③④①② C. ③④②① D. ③②①④

B

Is it *shi* (是) or *si* (斯) in the sentence “Thus when Heaven is about to confer a great office on any man (故天将降大任于是/斯人也)...”? Not long ago, people had a discussion online about this. Most people “clearly remember” that it's *si*, while their childhood textbooks say it's *shi*.

It shows how unreliable (不可靠的) our memory can be. According to US psychologist Fairn Brynie, memories can be influenced by imagination, belief and time. Many studies have shown that “feeling sure” about a memory sometimes has nothing to do with the facts.

Attitudes and beliefs change our memory.

Scientists at Cornell University, US, told college students a story about a man who walked out without paying a restaurant bill. The first group was told that the man “liked to steal”. The second group was told that he left because he got an emergency (紧急的) phone call.

One week later the first group remembered a higher bill—10 to 25 percent more than the bill actually was. The second group remembered a lower bill. The study showed that how we expect or believe things to happen can distort (扭曲) our memories.

Remembering things that never happened.

In another experiment (实验), people watched a film and were asked: “How fast was the white car going when it passed the barn (谷仓) while traveling along the country road?” Actually there was no barn in the film. But about 20 percent of the students said they had seen the barn. Northwestern University scientist Kenneth Paller said that parts of the brain for really seeing an object and imagining an object overlap (重叠). So imagination after getting a hint(暗示) could leave a memory trace (痕迹) in the brain.

Si or shi.

In the case of *si* or *shi*, some people said that *si* sounds more like ancient Chinese. That’s why most people “clearly remember” *si*. On the Internet, the version (版本) of *si* is also more widespread than *shi*, giving people a wrong hint.

31. In the first experiment, the first group remembered a higher bill because _____.
A. the students forgot the bill completely
B. the students thought the man was rich enough
C. the scientists made the students believe the man was bad
D. the scientists told the students that the man should pay more
32. What does the underlined word “hint” in the second experiment refer to?
A. The sights in the film. B. Kenneth Paller’s words.
C. A real barn in students’ memories. D. The word “barn” in the question.
33. What can we learn from the case of *si* or *shi*?
A. Feelings can influence people’s memories. B. The version of *shi* is more widespread.
C. People’s memories are always unreliable. D. There was no sound of *shi* in ancient Chinese.
34. The writer introduces two experiments in the text to _____.
A. lead in the topic B. give explanations C. ask questions D. make comparisons (对比)
35. Which of the following is the best title for the passage?
A. Are you really sure? B. Have you forgotten yet?
C. What should be remembered? D. How is the memory improved?

C

If you don’t use it, you lose it. At least, that’s how the old saying goes. It refers to the idea that something that does not get used often quickly falls into a state of decline (衰退). For example, a hobby that you haven’t done for a few years, like playing the piano. The next time you pick it up, maybe you’ve forgotten altogether! In order to avoid this, people take usual exercise to keep their skills well-practiced.

Well, what about the brain? As we age, our brains can naturally begin to decline. In some cases, this can lead to certain brain problems: such as dementia (痴呆). However, all is not lost because these days it's easy to train your brain. Smartphones and apps provide programs that can test, keep and even improve our memories and a number of other brain skills. With a little practice every day, we can keep our brains active, right?

Well, no, actually. According to a report from the Global Council on Brain Health, even though many people think it is beneficial to play some online games that are designed to improve brain health, the evidence (证据) of the benefits is "weak to non-existent". Playing a "brain game" might cause improvements in game performance, yet it hasn't proven to a believable result in people's daily cognitive (认知的) abilities.

Don't lose heart, though. There are other ways to develop the brain. It suggests trying new activities which can make you think in new ways, let you connect with others socially and help you lead a healthy life. Among their suggestions are practicing Tai Chi, taking photography classes, learning new technologies, gardening, art projects or volunteering.

There's more good news, too. James Goodwin, chief scientist at Age UK, has said that brain decline is not unavoidable. As long as the activities are "new to you and require your full focus", they can provide benefits for brain health. So, hurry up, get out there and try something new. Maybe it's time to try that hobby you've always wanted to do.

36. Why is playing the piano mentioned in paragraph 1?

- A. To introduce the topic of brain decline.
- B. To explain how to keep physically healthy.
- C. To show the importance of practice.
- D. To describe the meaning of an old saying.

37. According to the passage, how can the brain training apps help you?

- A. It will improve our memory.
- B. It can make us smarter.
- C. It can do little to train our brains.
- D. It can protect us from ageing.

38. How can we develop the brain according to the passage?

- A. Using smart phone regularly.
- B. Trying some new activities.
- C. Playing brain games online.
- D. Doing what you are good at.

39. What can we infer (推断) from the passage?

- A. Playing brain games can improve people's daily cognitive abilities.
- B. Playing brain games has been proven to help the brain work better.
- C. Repeating the skills you already know will be good for your brain.
- D. James Goodwin believes we can do something about brain decline.

40. What does the passage mainly tell us?

- A. How to keep brain healthy and active. B. How to live meaningfully at an old age.
C. Disadvantages of using smart phones. D. Advantages of trying something new.

to include 包括（动词不定式）；includes 包括（include 的第三人称单数形式）；including 包括（include 的动词-ing 形式）；included 包括（include 的过去式和过去分词）。分析“There are a variety of them...rhymes, spelling acronyms (首字母缩略词) and sentence mnemonics.”可知，此句是一个简单句，句中已包含 be 动词，主语 a variety of them 和动词 include 之间是主动关系，所以空格处用 include 的动词-ing 形式作伴随状语，故选 C。

4. 句意：押韵是一个记住事物的好方法。

remember 记住；to remember 记住（动词不定式）；remembered 记住（remember 的过去式和过去分词）；remembering 记住（remember 的动词-ing 形式）。a way to do sth.表示“一个做某事的方法”，故选 B。

learns 学会（learn 的第三人称单数形式）；learned 学会（learn 的过去式和过去分词）；have learned 已经学会（现在完成时）；is learning 正在学（现在进行时）。根据“since”可知，空格处应用现在完成时，其结构是 have/has+动词过去分词，主语 Most people 表示复数，所以助动词用 have，故选 C。

7. 句意：大多数人从小就学会了它，并且永远不会忘记它！

are 是；were 是（are 的过去式）；have been 是（现在完成时）；is being 是（现在进行时）。since +从句（从句用一般过去时）表示“自从.....”，所以空格处应填动词的过去式，故选 B。

to base 以.....为基础（动词不定式）；basing 以.....为基础（base 的动词-ing 形式）；base 以.....为基础；based 以.....为基础（base 的过去式和过去分词）。结合选项和“Spelling acronyms involve creating a sentence...on the letters of a target word.”可知，空格处作后置定语修饰名词 sentence，sentence 和动词 base 之间是被动关系，所以空格处应用 base 的过去分词作后置定语，故选 D。

9. 句意：注意这个句子中的每个单词的第一个字母是如何拼出单词“because”的。

one 一；first 第一；ones 人们，它们（指代前面提到的人或事）；second 第二。根据“Big elephants can always understand small elephants”可知，这句话中的每个单词的第一个字母可以拼出单词“because”，所以空格处应填 first，first letter 表示“第一个字母”，故选 B。

12. 句意：句子助记符也很有用。

useful 有用的；use 使用；usefully 有用地；useless 无用的。结合 also 和选项可知，此处表示句子助记符也很有用，空前有 be 动词 are，所以空格处应填形容词 useful“有用的”作表语，故选 A。

13. 句意：甜点有两块糖，所以它更甜，但是沙漠只有一块。

sweetest 最甜; sweet 甜的; sweeter 更甜; sweets 糖果。根据“A dessert has two sugars so it’s...but a desert only has one.”可知，此处暗含“dessert”和“desert”之间的比较，空格处应用比较级，结合选项可知，sweeter 符合语境，故选 C。

Recent research has shown that laughter strengthens the heart, helps the flow of blood 17 the body, reduces pain, aids healing, fights infections, and decreases blood pressure. It also improves memory, makes people feel more confident, and 18 to a positive view of life.

Laughter Clubs None of this 19 would surprise Dr. Madan Kataria. After reading about some of the benefits of laughter, he 20 a “Laughter Club” in a public park in Bombay, India. That was in 1995. There are now more than 2,500 such clubs around the world following his practice.

Club meetings aren’t exactly 21 , but that’s sort of the point. Although the noise may surprise those passing by, the participants know exactly what they’re doing and why they’re doing. It’s good for them. Meetings are often held 22 in the day, so people can get in a good twenty minutes or more of laughing before they head off for work. Once there, members believe, they concentrate (集中心思) better and are more 23 .

Just Fake It How do these clubs find enough jokes to keep everyone howling? They don’t. According to Dr. Kataria, it doesn’t 24 if laughter is produced naturally, by actually finding something funny, 25 if it is faked (假的). The benefits to the body are the same. Laughter club leaders get things going without any comedians around to help.

B

Is it *shi* (是) or *si* (斯) in the sentence “Thus when Heaven is about to confer a great office on any man (故天将降大任于是/斯人也)...”? Not long ago, people had a discussion online about this. Most people “clearly remember” that it’s *si*, while their childhood textbooks say it’s *shi*.

It shows how unreliable (不可靠的) our memory can be. According to US psychologist Fairn Brynie, memories can be influenced by imagination, belief and time. Many studies have shown that “feeling sure” about a memory sometimes has nothing to do with the facts.

Attitudes and beliefs change our memory.

Scientists at Cornell University, US, told college students a story about a man who walked out without paying a restaurant bill. The first group was told that the man “liked to steal”. The second group was told that he left because he got an emergency (紧急的) phone call.

One week later the first group remembered a higher bill—10 to 25 percent more than the bill actually was. The second group remembered a lower bill. The study showed that how we expect or believe things to happen can distort (扭曲) our memories.

Remembering things that never happened.

In another experiment (实验), people watched a film and were asked: “How fast was the white car going when it passed the barn (谷仓) while traveling along the country road?” Actually there was no barn in the film. But about 20 percent of the students said they had seen the barn. Northwestern University scientist Kenneth Paller said that parts of the brain for really seeing an object and imagining an object overlap (重叠). So imagination after getting a hint (暗示) could leave a memory trace (痕迹) in the brain.

Si or shi.

In the case of *si* or *shi*, some people said that *si* sounds more like ancient Chinese. That's why most people "clearly remember" *si*. On the Internet, the version (版本) of *si* is also more widespread than *shi*, giving people a wrong hint.

31. In the first experiment, the first group remembered a higher bill because _____.
A. the students forgot the bill completely
B. the students thought the man was rich enough
C. the scientists made the students believe the man was bad
D. the scientists told the students that the man should pay more
32. What does the underlined word "hint" in the second experiment refer to?
A. The sights in the film. B. Kenneth Paller's words.
C. A real barn in students' memories. D. The word "barn" in the question.
33. What can we learn from the case of *si* or *shi*?
A. Feelings can influence people's memories. B. The version of *shi* is more widespread.
C. People's memories are always unreliable. D. There was no sound of *shi* in ancient Chinese.
34. The writer introduces two experiments in the text to _____.
A. lead in the topic B. give explanations C. ask questions D. make comparisons (对比)
35. Which of the following is the best title for the passage?
A. Are you really sure? B. Have you forgotten yet?
C. What should be remembered? D. How is the memory improved?

【答案】31. C 32. D 33. A 34. B 35. A

【导语】本文讲述了想象力、信念和时间会影响我们的记忆。

35. 最佳标题题。本文讲述了想象力、信念和时间会影响我们的记忆，因此对一段记忆感到确定有时并非如此。故选 A。

C

If you don't use it, you lose it. At least, that's how the old saying goes. It refers to the idea that something that does not get used often quickly falls into a state of decline (衰退). For example, a hobby that you haven't done for a few years, like playing the piano. The next time you pick it up, maybe you've forgotten altogether! In order to avoid this, people take usual exercise to keep their skills well-practiced.

Well, what about the brain? As we age, our brains can naturally begin to decline. In some cases, this can lead to certain brain problems: such as dementia (痴呆). However, all is not lost because these days it's easy to train your brain. Smartphones and apps provide programs that can test, keep and even improve our memories and a number of other brain skills. With a little practice every day, we can keep our brains active, right?

Well, no, actually. According to a report from the Global Council on Brain Health, even though many people think it is beneficial to play some online games that are designed to improve brain health, the evidence (证据) of the benefits is "weak to non-existent". Playing a "brain game" might cause improvements in game performance, yet it hasn't proven to a believable result in people's daily cognitive (认知的) abilities.

Don't lose heart, though. There are other ways to develop the brain. It suggests trying new activities which can make you think in new ways, let you connect with others socially and help you lead a healthy life. Among their suggestions are practicing Tai Chi, taking photography classes, learning new technologies, gardening, art projects or volunteering.

There's more good news, too. James Goodwin, chief scientist at Age UK, has said that brain decline is not unavoidable. As long as the activities are "new to you and require your full focus", they can provide benefits for brain health. So, hurry up, get out there and try something new. Maybe it's time to try that hobby you've always wanted to do.

36. Why is playing the piano mentioned in paragraph 1?

- A. To introduce the topic of brain decline. B. To explain how to keep physically healthy.
C. To show the importance of practice. D. To describe the meaning of an old saying.

37. According to the passage, how can the brain training apps help you?

- A. It will improve our memory. B. It can make us smarter.
C. It can do little to train our brains. D. It can protect us from ageing.

38. How can we develop the brain according to the passage?

- A. Using smart phone regularly. B. Trying some new activities.
C. Playing brain games online. D. Doing what you are good at.

39. What can we infer (推断) from the passage?

- A. Playing brain games can improve people's daily cognitive abilities.
B. Playing brain games has been proven to help the brain work better.
C. Repeating the skills you already know will be good for your brain.
D. James Goodwin believes we can do something about brain decline.

40. What does the passage mainly tell us?

- A. How to keep brain healthy and active. B. How to live meaningfully at an old age.
C. Disadvantages of using smart phones. D. Advantages of trying something new.

38. 细节理解题。根据“‘There are other ways to develop the brain. It suggests trying new activities which can make you think in new ways, let you connect with others socially and help you lead a healthy life.’”可知，有其他方法可以开发大脑，建议尝试一些可以让你以新的方式思考、与他人社交并帮助你过上健康生活的新活动。因此，根据文章内容，我们可以通过尝试一些新的活动来开发大脑。故选 B。

39. 推理判断题。根据最后一段内容可知，James Goodwin 认为大脑衰退并非不可避免，只要我們做一些“对你来说是新的且需要你全神贯注”的活动，它们就可以对大脑健康有益。因此可以推断出 James Goodwin 认为我们可以采取措施来应对大脑衰退。故选 D。

40. 主旨大意题。通读全文可知，文章主要讲述了如何保持大脑健康和活跃，提到了大脑会随着年龄的增长而自然衰退，但是通过尝试一些新的活动可以保持大脑的活跃和健康。因此本文的主旨是告诉我们如何保持大脑健康和活跃。故选 A。

Is there a relation between music and language? According to recent studies, the answer is yes.

41 _____ Here, we look at two examples.

A recent study by researcher Kraus shows that playing a musical instrument can improve a person's hearing ability. 42 The people in the first group were musicians, while those in the second group had no musical training. The musicians were able to hear the talking person more clearly.

43 When the violinists play with the group, they hear their own instrument and many others, too. But the violinists must listen closely to what they are playing, and pay no attention to the other sounds. In this way, musicians are able to hear certain sounds, even with lots of noise.

Schlaug, a doctor, works with stroke (中风) patients. Because of their illness, these people cannot say their names, addresses, or other information normally. However, they can still sing. Schlaug was surprised to find that singing words helped them to speak. Why does this work? Music seems to make different parts of the brain work, including the damaged (损坏的) parts. 44

Music improves memories, listening skills, and our language abilities. 45 Music is not only enjoyable, but it's also good for us in many other ways.

- A. It can even help sick people get better.
- B. Music improves certain language abilities in the brain.
- C. This might help patients to use that part of the brain again.
